# May | Empower Your Moderators with Our Enhanced Activity Feed Features

Wanting to give your moderators more control and flexibility in managing your event's Activity Feed? We're pleased to introduce our latest enhancements designed to empower moderators and administrators with tools to curate and manage content effectively.

Moderator Assignment: Enhanced Content Control

Our new feature allows administrators to easily assign and update moderator roles. This enhancement ensures that content control is in the right hands, providing a more organised and managed Activity Feed.

Post Box Toggle: Flexible Posting Controls

Introducing the post box toggle on the CMS:

- Enable/Disable Posting: Administrators can toggle the function of adding posts to the Activity Feed wall on or off.

- User Control: When disabled, users on the frontend app cannot add new posts. When enabled, they can post freely.

Post Pinning and Ordering: Highlight Important Content

New functionalities on the CMS allow administrators to:

- Pin Posts: Highlight important posts by pinning them within the Activity Feed.

- Flexible Ordering: Arrange pinned posts according to preferences, ensuring the most important content is always visible.

Activity Feed Title Setting: Customise Your Feed

Admins now have the option to set a custom title for the Activity Feed wall via the CMS:

- Custom Titles: Update titles to align with the context or theme of the event.

- Character Limit: Ensure titles are concise with an imposed character limit.

Moderator Actions on Frontend: Maintain Content Quality

Moderators on the frontend app are now empowered to:

- Hide Posts and Comments: Maintain a positive and relevant content environment by hiding inappropriate or irrelevant posts and comments.

Pinning Posts on Frontend: Real-Time Content Management

Moderators can now pin posts directly from the frontend app:

- Chronological Pinning: Pinned posts are ordered based on the time of pinning, allowing for a chronological arrangement that keeps the most recent and relevant content at the top.

These new features are designed to give moderators and administrators greater control over the Activity Feed, enhancing the overall content management experience. We're committed to providing the tools you need to create a dynamic and engaging event environment.
