

Hybrid / virtual platform vs Event app / in person platform

The platform itself is the same and built using the same admin dashboard. The primary difference in feature set is that the hybrid / virtual platform comes with the session video player with engagement interface to allow remote audience to participate in real time with streamed sessions. Hosting for the live streams is also supported for this version of the platform.

Live stream engagement interface: Available on the virtual and hybrid platform

The in person platform comes at a lower price point due to the support and running costs being lower for an in person platform where data costs related to hosting a stream are removed.

Feature(s)	Hybrid / Virtual Platform (Web based)	In-Person Platform (Web based)
