

Social Media

The Social Media Module is a home for external social media links within the platform.

Most of the links will open with the platform. However LinkedIn will redirect to an external web page - this is to do with the way the LinkedIn webpage is configured and cannot be changed.

To add a social media module, select this from the builder section and then name it something relevant. Once added you then need to **add the user name/handle**, rather than the whole url.

The social media links which can be linked are as follows: **Facebook, Twitter, Snapchat, YouTube, LinkedIn, Instagram, Vimeo and Twitter Hashtags.**

Remember you can also add social media links to individual people's profiles. More information on adding people profiles can be seen [here](#).

Social Media Fields

Enter your social media profile names into these fields to connect them to your social media module.

- Facebook Link
- Instagram Link
- Snapchat Link
- Twitter Handle
- Youtube Link
- Vimeo Link
- LinkedIn Link

Twitter Hashtags

Twitter hashtags will appear in your social media module, displaying all related twitter posts within the past 2 weeks.

Twitter Hashtags

Hashtags can be separated using the enter key or by typing a comma
