

Triggers

Ways triggers can be used:

- Award points when user uploads a profile picture
- Award points when a user responds to a poll question
- Award points when a user gives a specific response to a poll question

An example of a way to use triggers (user responds to choice poll choice), is to add a question at the end of a survey which says "Would you like to receive xx free points for completing the survey" with a Yes / No answer.

It's really handy being able to automatically assign points to users who upload a profile picture.

If using a trigger to award points, make sure the gamification module has the toggle on for "Show scores for the whole app on the leaderboard (including all modules and points awarded for triggers)" in the settings tab.
