

Enabling Video Library

Please contact your CrowdComms' Account Manager if you would like Video Library activated on your Event App.

The screenshot displays the CrowdComms admin dashboard. The top navigation bar includes the CrowdComms logo, the user's name 'Safia Sulani', and a language dropdown set to 'English (English)'. A left-hand sidebar lists various management tools such as Settings, Builder, Libraries (highlighted), Add-ons, Alerts, Analytics, Triggers, and Plugins. The main content area is titled 'Video Libraries' and features a central video player interface with a 'KEYNOTE SPEECH' video and a 'WATCH MORE' section. To the right of the video player, a list of features is provided:

- Feature videos
- Thumbnail packshot poster artwork
- Watch in situ
- Multi-category libraries in one place
- Engage your audience pre and post event
- Host your videos in the platform
- Automatic Livestream to OnDemand conversion

At the bottom of the main content area, a purple text prompt reads: 'Speak to your account manager to activate this feature'.
